

Boston Children's Hospital
Laboratories of Cognitive Neuroscience

Social Story for EEG

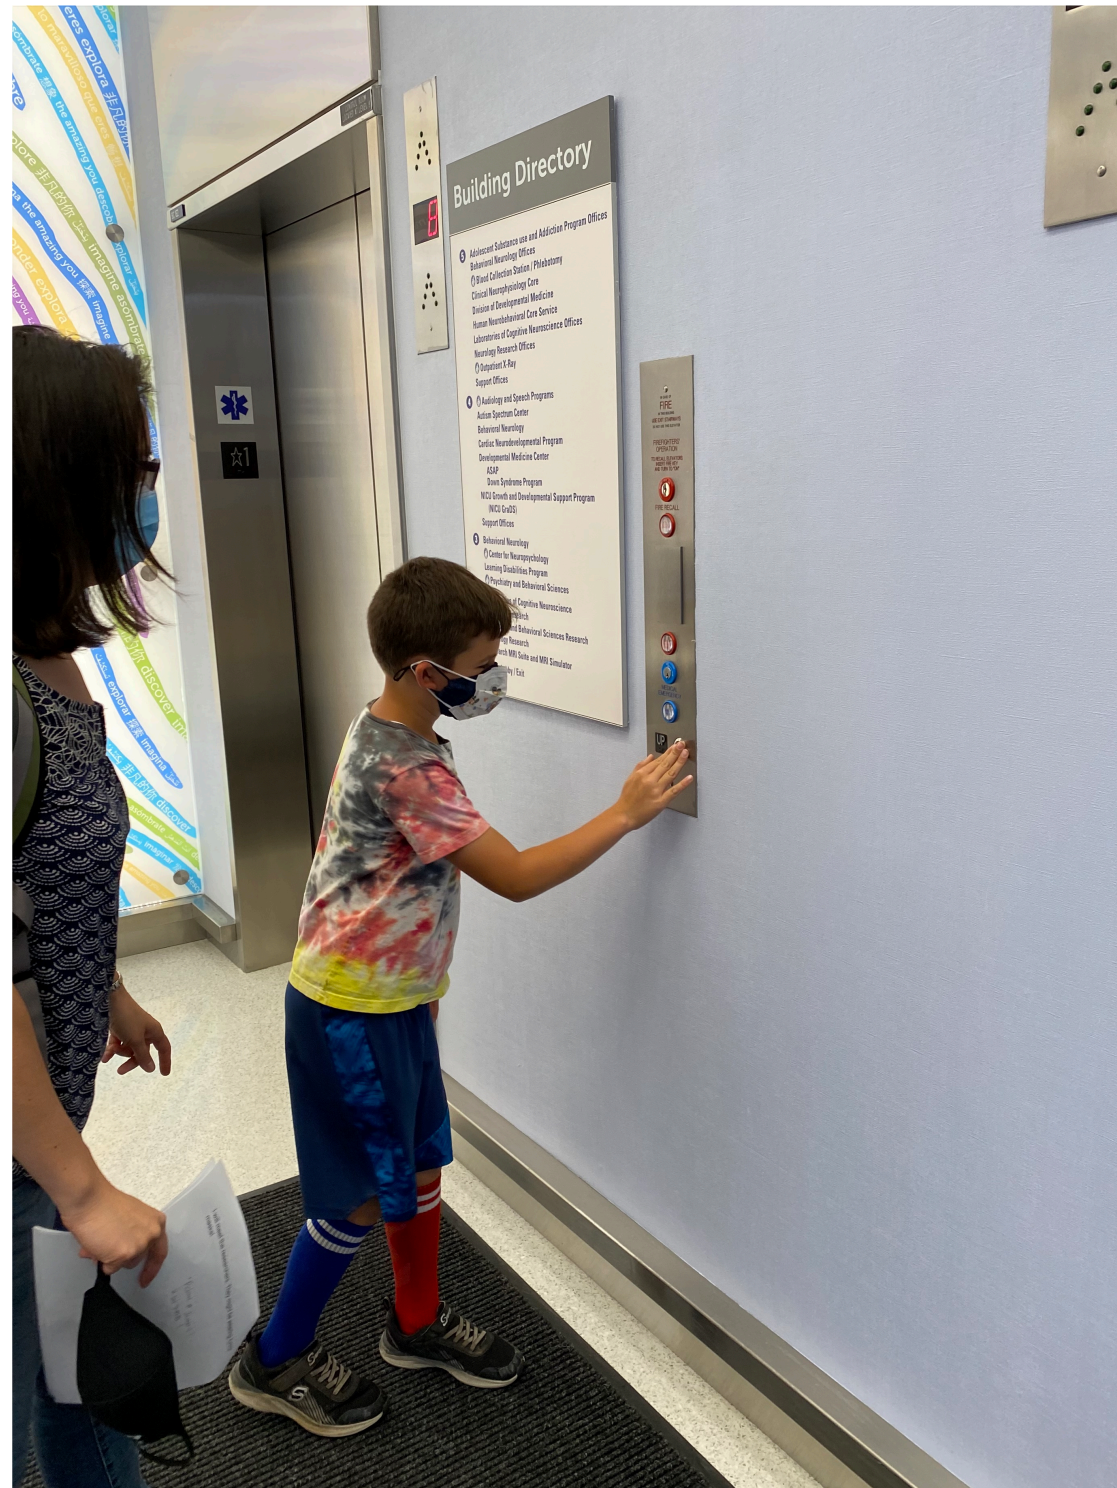

Today I am going to the Labs of Cognitive Neuroscience to help people learn about how kids think and learn!

I will get a mask from the front desk.

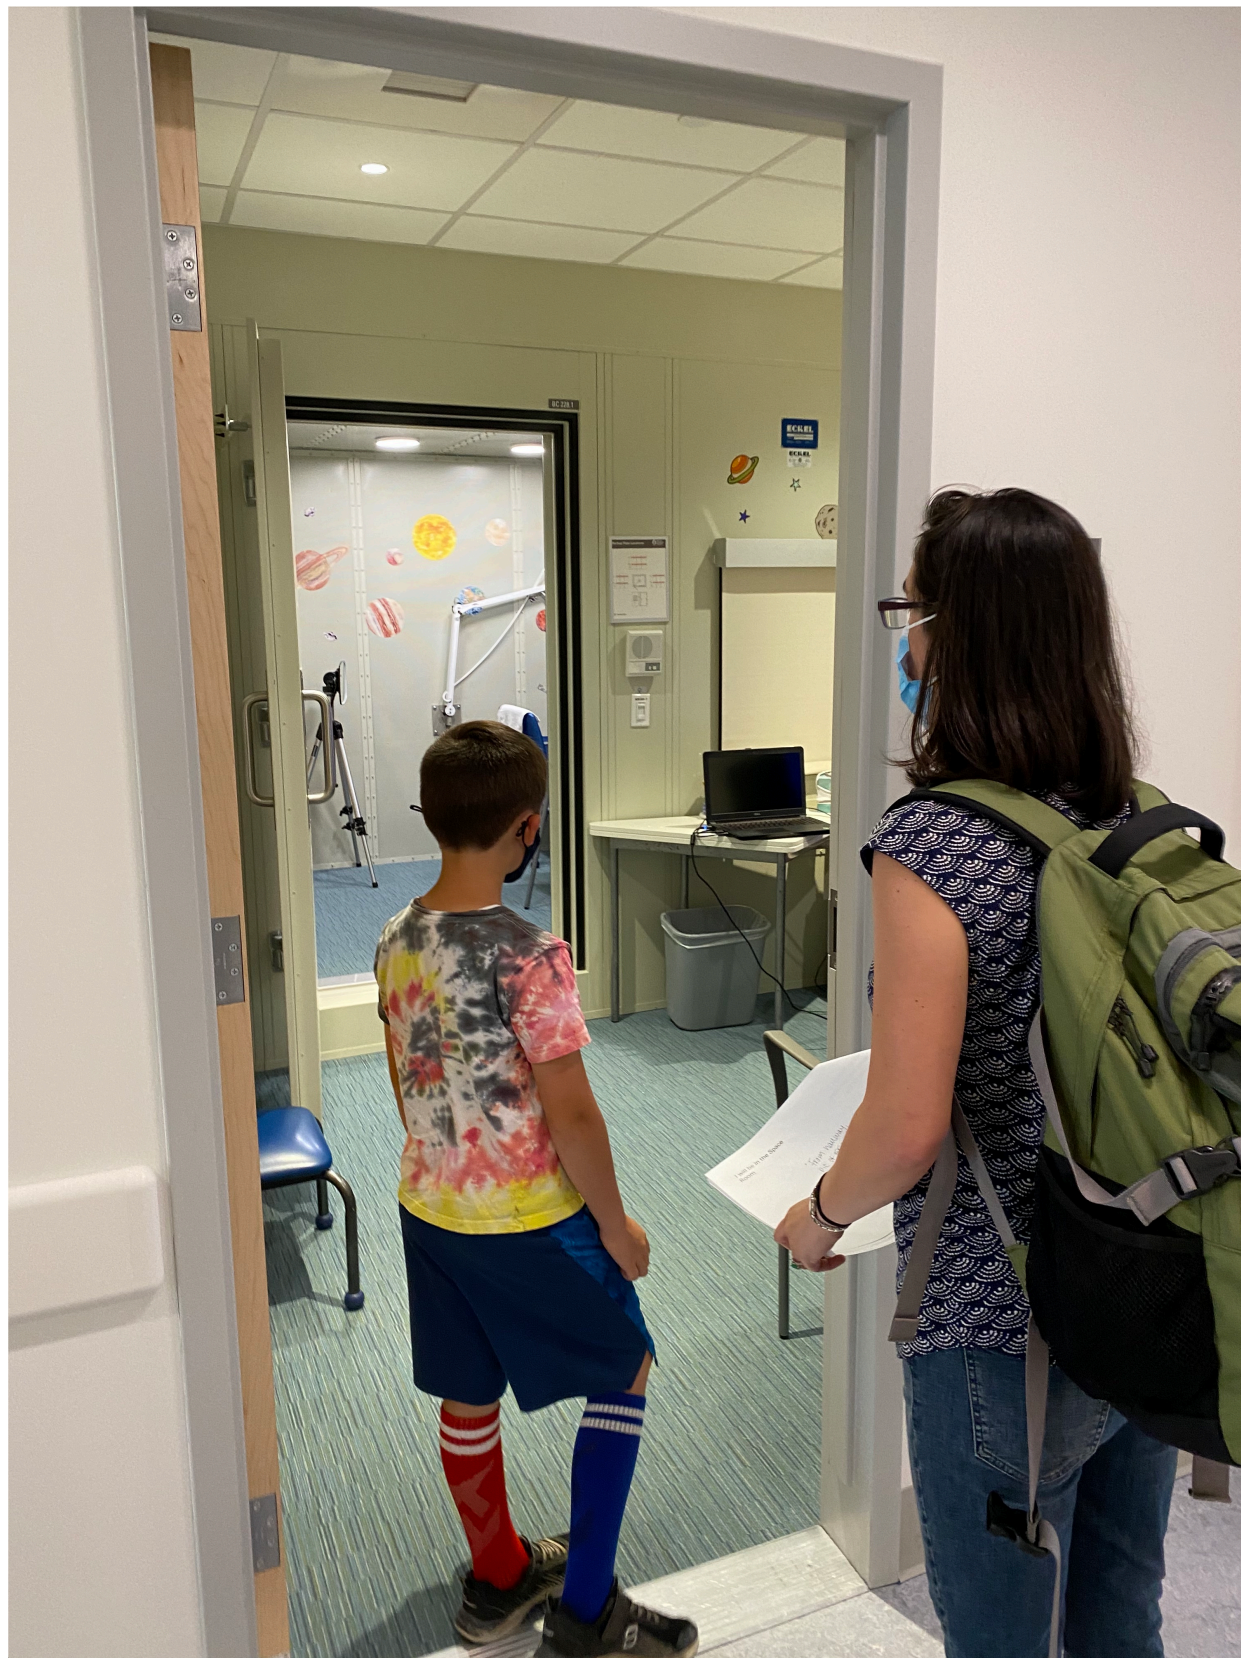

I will meet the researchers. They might be wearing funny masks!

Together, we will take the elevators to the 2nd Floor.

We will see pictures of stars and animals on the wall and go through 2 doors.

I will be in the
Space Room.
There are planets
on the walls!

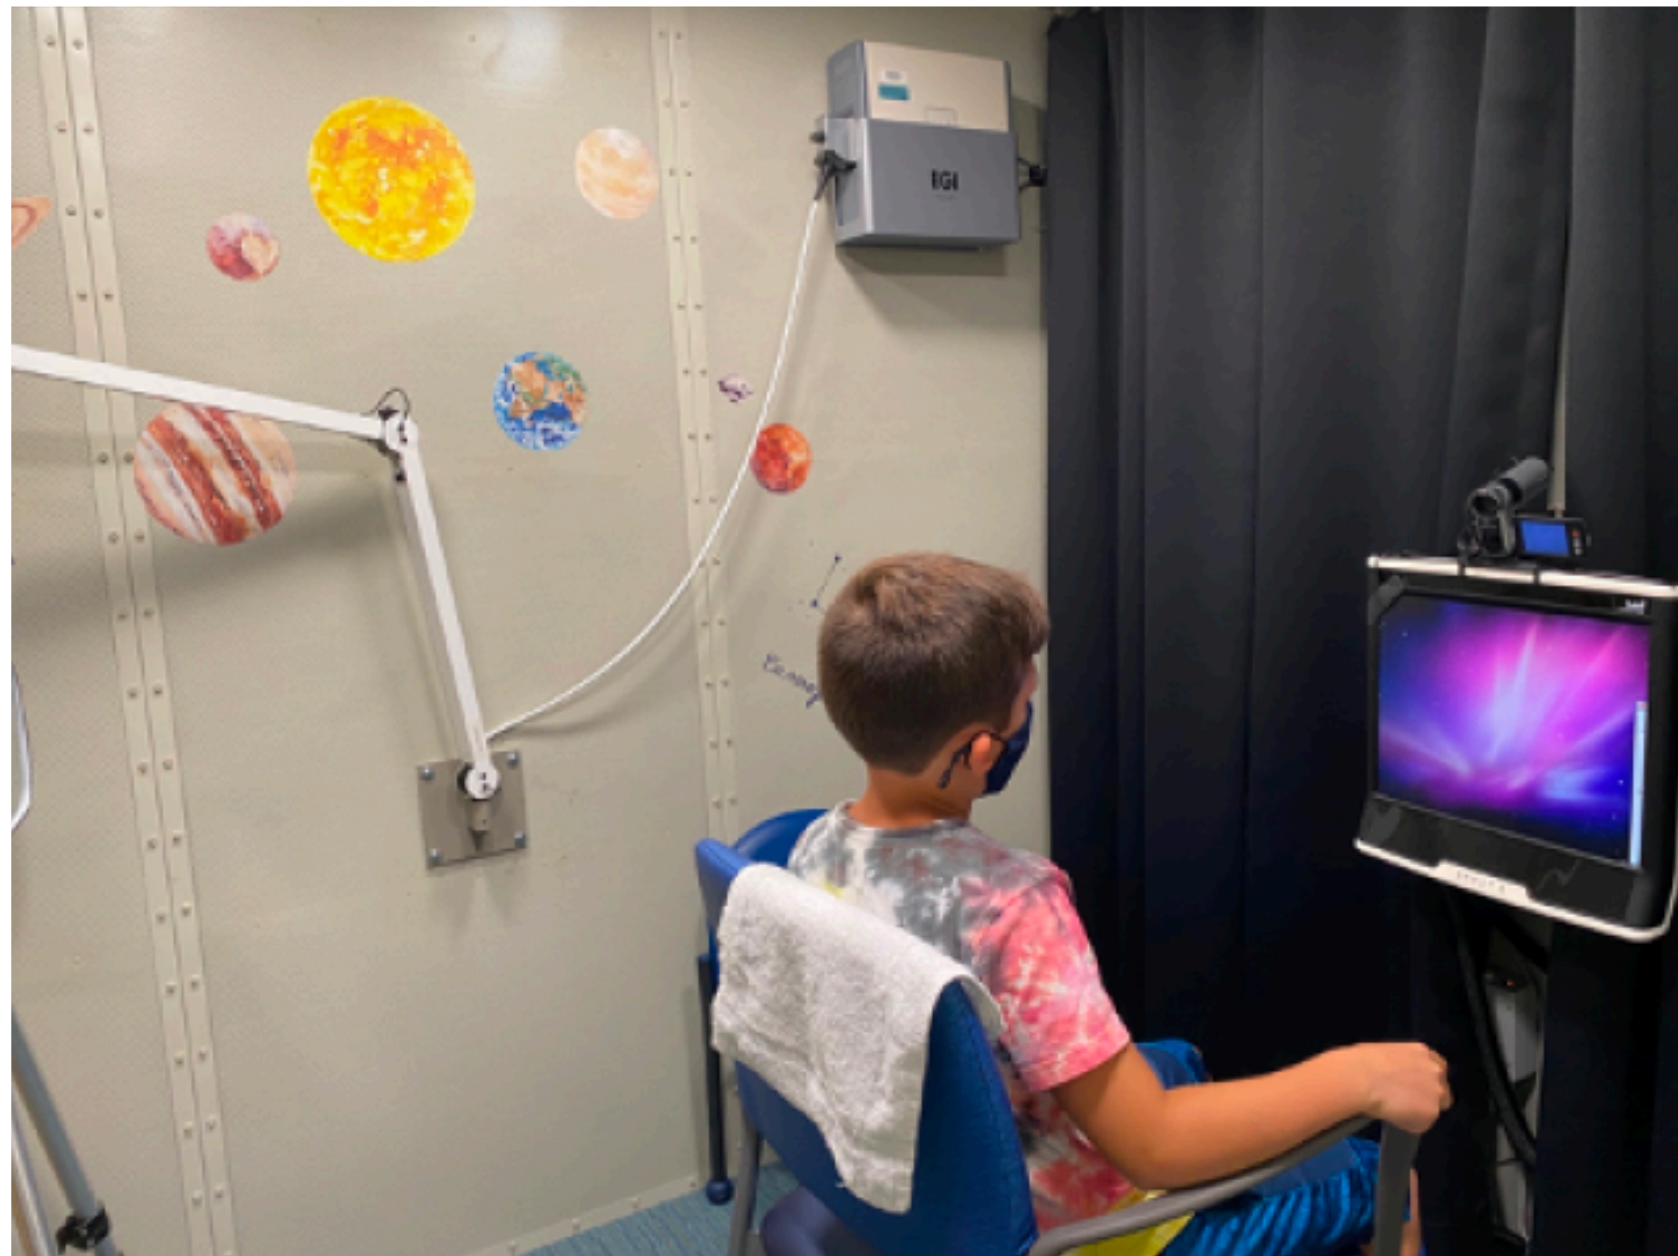

There is also a monkey astronaut in the room.

I will get to wear a hat just like that!

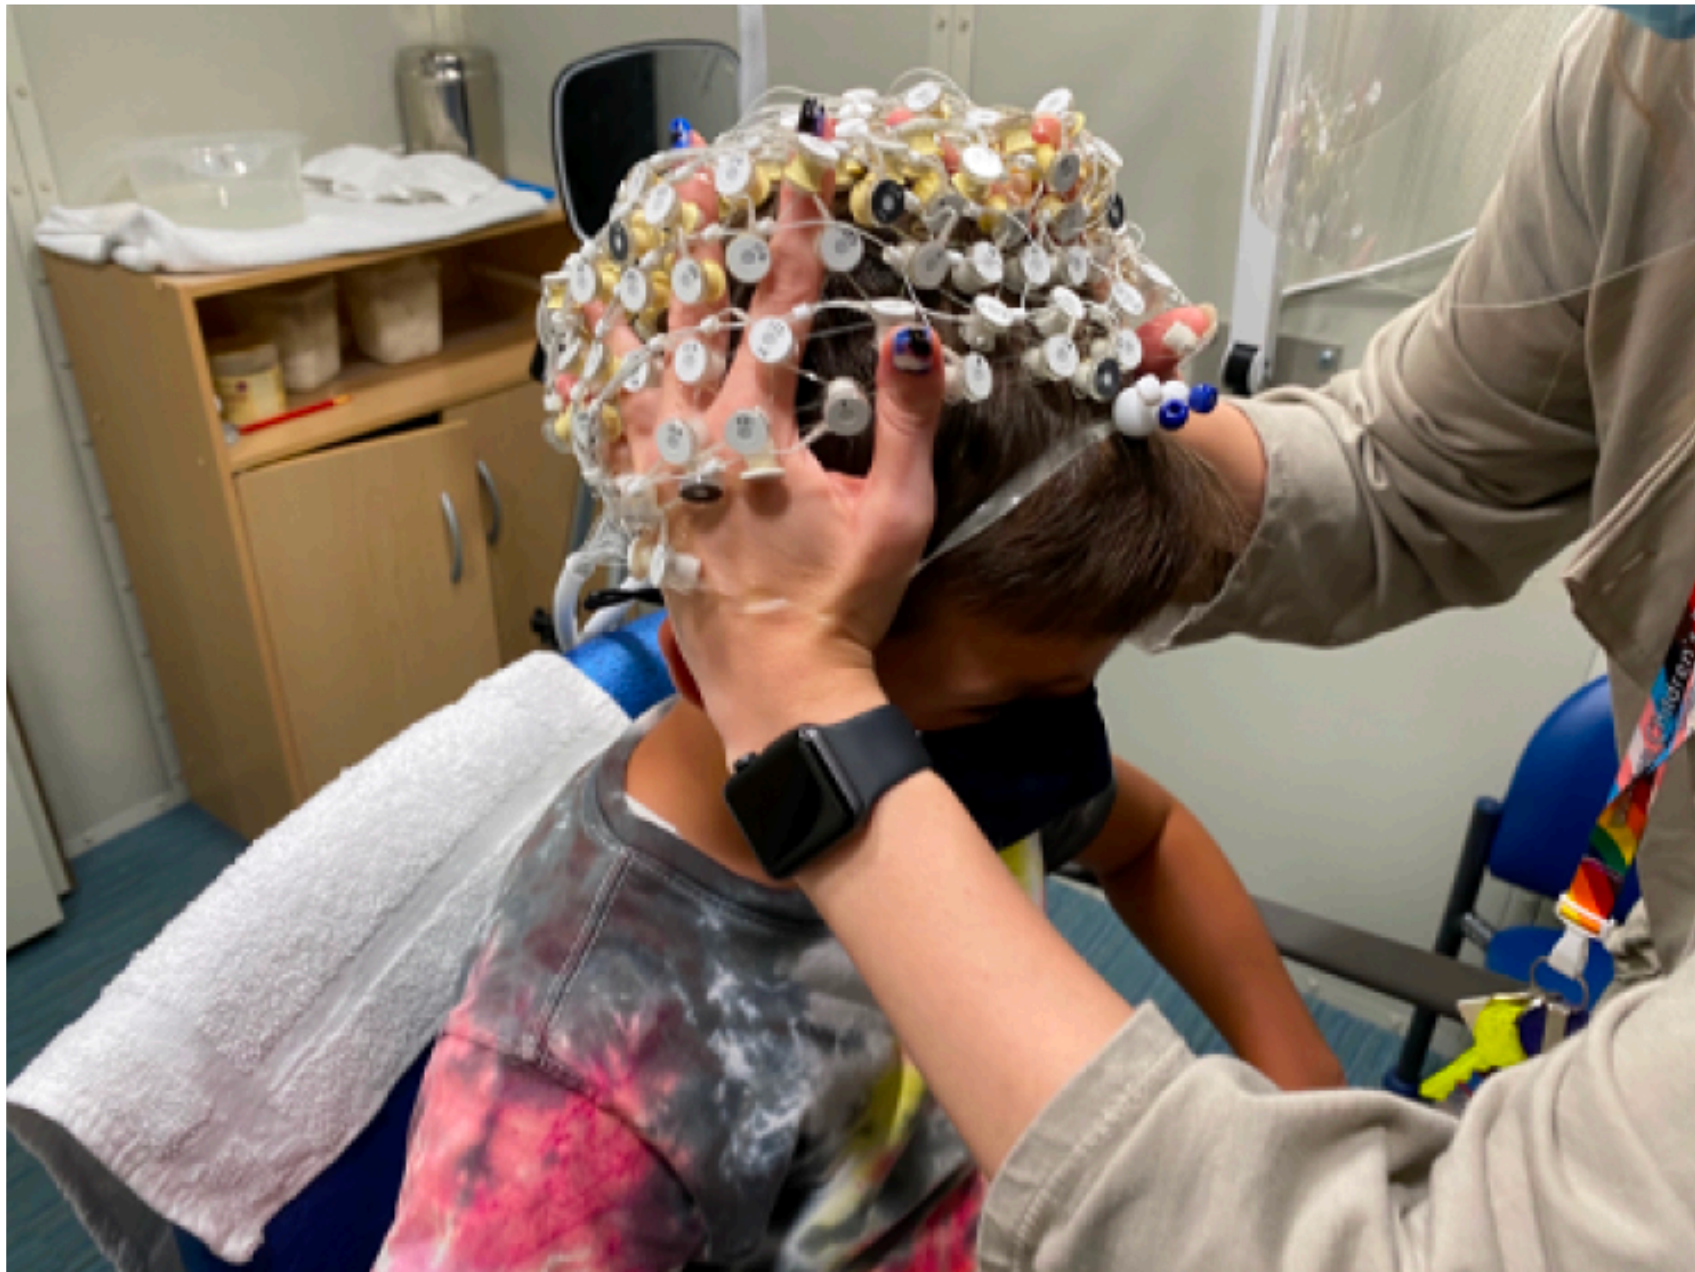

I will have string wrapped around my head for a few seconds so we know how big my head is!

I will sit in a chair by myself or on my parent's lap.
We will get ready to put a special hat on my head!

The hat has little rubber buttons.
I can touch it if I want. It is a little bit wet.

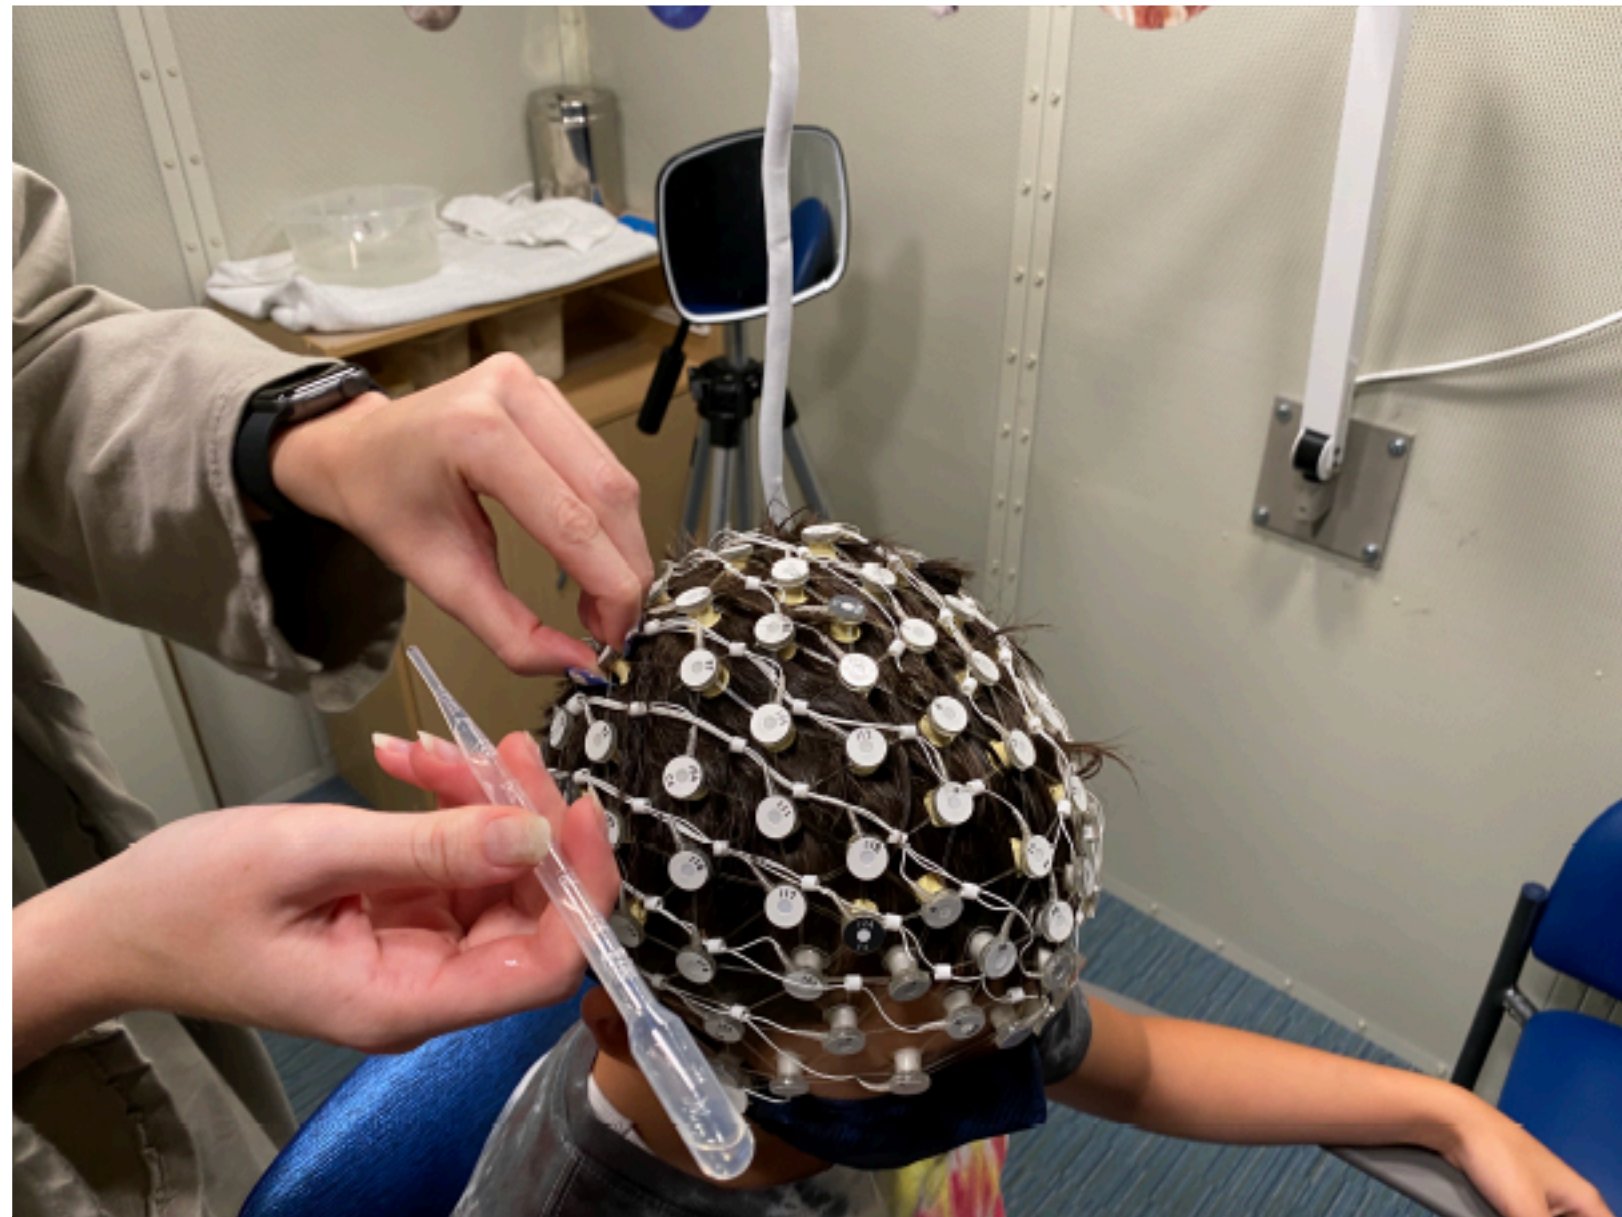

I will sit still when the hat goes on my head. It might be a little bit wet, but it does not hurt.

We have to make sure
that the hat is on just
right.

I can watch a movie while I am wearing the hat.

While I watch a movie, someone will wiggle the buttons on the hat and put a little liquid under the buttons. I will sit still. It doesn't hurt!

With my hat on,
I will watch
videos and
listen to sounds.

I will get
stickers and a
prize when I am
done!
